**CRESCENT POINT ENERGY CORP.  
PUBLIC AWARENESS**

**Why is Crescent Point contacting you?**

Crescent Point Energy operates wells, pipelines and associated facilities in your area. Crescent Point is proactively conducting public awareness with landowners and residents near our wells, pipelines and facilities.

We want to maintain good lines of communication with you because you need to know what we are doing and you need to know what to do and who to contact if you have an odour complaint, concern, question, or if you suspect a problem.

We ask that you review the attached information and keep the brochure available for reference.

**About Crescent Point**

Crescent Point Energy Corp. (Crescent Point) is a conventional oil and gas producer. But we are anything but conventional. We are dynamic, disciplined and driven by results. We have high-quality light and medium oil and natural gas assets across western Canada and the United States.

Crescent Point recognizes the importance of establishing and maintaining positive relationships with our community neighbors. It is Crescent Point's intention to meet or exceed all regulatory requirements related to the ongoing operation of our wells, pipelines and associated facilities.

For more information, please visit [www.crescentpointenergy.com](http://www.crescentpointenergy.com)

**Crude Oil Operations**

Our crude oil infrastructure includes gathering pipeline systems and numerous crude oil facilities.

Our existing infrastructure is designed to support our gathering and marketing activities. These activities include:

- Producing crude oil from the well head and transporting the oil via pipeline interconnects to our facilities or when necessary, via assets owned by third party parties, including pipelines; and
- Marketing crude oil to refiners or other resellers, either via third party pipelines or via rail.

**WHAT IS CRUDE OIL?**

Crude oil is a mixture of naturally occurring paraffins; naphthenes; aromatic hydrocarbons and small amounts of sulphur and nitrogen compounds. The composition and properties will vary significantly according to the source of the crude. Crude oil with sulphur content greater than 0.5 weight percent is considered sour. This product is a commingled stream from multiple petroleum facilities.

**Potential Health Effects from Crude Oil Exposure**

EYES: Moderate to severe irritation.

SKIN: Slight to moderate irritation.

INGESTION: Ingestion may cause gastrointestinal disturbances, such as irritation, nausea, vomiting and diarrhea and central nervous system effects.

INHALATION: Vapours may cause nose and throat irritation, anesthetic effects and central nervous system (CNS) depression.

**WHAT IS HYDROGEN SULPHIDE (H<sub>2</sub>S)?**

H<sub>2</sub>S gas, or sour gas, is naturally occurring, colourless, flammable, highly toxic and slightly heavier than air. At very low concentrations it has an offensive odour, like rotten eggs, but at higher concentrations and with prolonged exposure it deadens the sense of smell. Concentrations of H<sub>2</sub>S are generally measured in parts per million (ppm). It affects people differently depending on concentration and length of exposure.

**Potential Health Effects from H<sub>2</sub>S Exposure**

EYES: Moderate eye irritation.

NOSE, THROAT: Severe irritation.

LUNGS: Severe lung irritation, excitement, headache, dizziness, sudden collapse, unconsciousness and death within a few hours.

RESPIRATORY SYSTEM: Respiratory paralysis, irregular heartbeat, collapse and death without immediate rescue.

**WHAT IS SULPHUR DIOXIDE (SO<sub>2</sub>)?**

Sulphur Dioxide (SO<sub>2</sub>) is the product of the burning of sulphur or H<sub>2</sub>S. At normal temperature and pressure it is a colourless gas with a choking odour. Under pressure, SO<sub>2</sub> is a non-flammable, toxic, and corrosive liquid that may cause chemical burns.

**Potential Health Effects from SO<sub>2</sub> Exposure**

EYES / SKIN: Can cause burns

INGESTION: Unlikely route of exposure.

INHALATION: Can cause respiratory tract burns.

Exposure to higher concentrations may irritate eyes, nose, throat, and sinuses with choking and coughing. Exposures of 400-500 ppm are immediately life-threatening.

## Environment, Health & Safety

Crescent Point's operations are subject to stringent federal, provincial and local laws and regulations governing the discharge of materials into the environment or otherwise related to protecting the environment.

The health and safety of employees, contractors, visitors and the public, as well as the protection of the environment, is of the utmost importance to Crescent Point.

We strive to conduct our operations in a manner that will minimize both adverse effects and consequences of emergency situations by:

- Complying with government regulations and standards;
- Conducting operations consistent with industry codes, practices and guidelines;
- Ensuring prompt, effective response and repair to emergency situations and environmental incidents;
- Providing training to employees and contractors to ensure compliance with company safety and environmental rules and monitoring activities;
- Promoting the aspects of careful planning, good judgement, implementation of the company's procedures and monitoring activities;
- Communicating openly with members of the public regarding our activities; and
- Amending Crescent Point's policies and procedures as may be required from time to time.

## Monitoring Operations

Crescent Point's Weyburn and Carlyle offices are the hub of operations for all of the company's southeast Saskatchewan crude oil assets, and a key part of its environmental protection program.

The Weyburn and Carlyle offices play an important role in preventing well, pipeline and facility damage, leaks and spills, as well as responding to any emergency.

Crescent Point has established written emergency procedures for a variety of emergency situations that could potentially occur. Accurate procedures allow for a rapid, organized and safe response to an emergency. We believe that written emergency procedures are only effective if implemented and executed properly. Crescent Point conducts frequent mock emergency response drill to practice emergency preparedness in order to keep our employees' response skills fresh and to familiarize local fire and police departments with our facilities and emergency response procedures and capabilities.

## Your Safety is Our Priority

*We will treat your concerns with the same priority as an emergency. If you have a concern or have questions for us:*

Please call Crescent Point's 24-hour emergency number (**1-888-799-0043**). When you reach our 24-Hour Emergency Number, let the operator know you are closest to Weyburn. The proper people will then be dispatched to handle the call, as per how our emergency dispatch call out system is organized.

While the chance of an uncontrolled spill or problem is remote, the Crescent Point Emergency Response Plan (ERP) for this area is in place to ensure your safety. If a leak should occur, emergency crews will take immediate steps to minimize the risk to the public and environment. In the event of an emergency, Crescent Point will be working with government agencies and other local authorities.

As a result of your quick action, the Crescent Point ERP will be activated. Additional emergency response personnel will be notified and dispatched to the area to safely manage the emergency.

## Notification

If you are contacted by Crescent Point to advise you of an emergency situation, the caller will:

- Identify him/herself by name.
- State that he/she is a Crescent Point representative.
- Describe the problem and what is being done.
- Give you instructions to protect your safety (shelter /evacuation).
- Verify the information you have provided.
- Address any concerns which you may have.
- Provide a telephone number which you can call to get additional information.

## Shelter-in-Place Procedures

If you are advised to stay sheltered, do not leave your house or attempt to start any vehicles until a Crescent Point representative advises you that it is safe to do so. The following steps should be taken if "Shelter-In-Place" procedures have been implemented:

- Immediately gather everyone indoors and stay there.
- Close and lock all windows and outside doors, if possible, tape any gaps around exterior door frames.
- Extinguish indoor wood burning fires and close flue dampers if possible.
- Turn off anything that circulates air, such as:
  - » Furnaces
  - » Gas Stoves
  - » Clothes Dryers
  - » Bathroom Fans
  - » Ventilators
  - » Built-in Vacuum Systems
  - » Kitchen Fans
  - » Air Conditioning
  - » Gas Fireplaces
- Leave all inside doors open.
- Wait in an interior room upstairs for further instruction.
- Avoid using the telephone, except for emergencies, so that you can be contacted by Crescent Point emergency response personnel.
- Call the company if you are experiencing symptoms, smelling odours, or have contacted government agencies (so the response can be coordinated).

- Stay tuned to local radio and television for possible information updates.
- Even if you see people outside, do not leave until told to do so.
- If you are unable to follow these instructions, please notify Crescent Point emergency response personnel.

After the hazardous substance has passed through the area you will receive an "all-clear" message from Crescent Point emergency response personnel.

You may also receive, if required, instructions to:

- Ventilate your building by opening all windows and doors; turn on fans and turn up thermostats. During this time the air outside may be fresher.

## Evacuation Procedures

If it is necessary to evacuate, you will be contacted by telephone immediately. If there is no answer to our calls, we will proceed to your residence to inform you of the situation. The following steps should be taken if evacuation procedures have been implemented:

- Gather all residents and bring any medicines required.
- Lock all windows and doors.
- Turn down thermostat and shut off any air exchange fans to outside.
- Crescent Point response staff will direct you to a suitable local reception centre.
- Drive safely on the route provided and proceed directly to the reception centre and check in with the representative.
- Wait for further instruction.
